left nav populates as a subseet of the global header - for example, when control is activated, all modules on which the user can exercise custimization appear as sub cats in the left nav. In this case, the master control settings
Snapping ability allows for easy alignment, preventing unintended window movement and ensuring consistent workspace presentation as intended/designed by
This 1st tier left nav allows the user to set and select from a number of previously saved workspace "canvases"/ views/scenarios/ to accomodate various use cases as needed
