left nav populates as a subset of the global header - for example, when control is activated, all modules on which the user can exercise customization appear as sub cats in the left nav. In this case, the master control settings

Snapping ability allows for easy alignment, preventing unintended window movement and ensuring consistent workspace presentation as intended/ designed by

This 1st tier left nav allows the user to set and select from a number of previously saved workspace "canvases"/ views/scenarios/ to accomodate various use cases as needed
